

# **Healthy VRF**

# **VRF Development Process**

# **Scientific Research Strength**

# TICA is the first Chinese central air conditioner brand to establish R&D institute in Japan

Engaged in advanced research on technologies of VRF, heat pump water heater, cryo-refrigeration, heat pump chiller, professional ACU, air purifier, etc.; utilizing talents in Japan to promote the development of Chinese central airconditioning technology. TICA 天加日本研究所 TICA R&D Institute Japan

# Boasting industry-leading CNAS-certified Enthalpy Difference Labs

In accordance with GB, IEC, TUV and CSA standards, adhering to the principles of impartiality, independence and scientific standards as well as people-oriented.

## **Application Solutions**

#### Office Complexes

Enjoy comfort while working

#### Hotels & Shopping Malls

#### Increase your business, not your bills

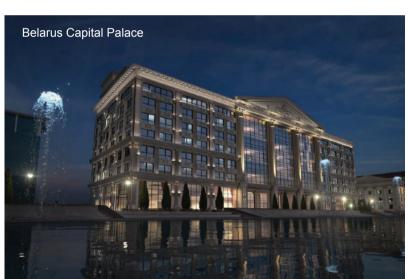

Hotels

Shopping malls

#### Factories

#### One for Every Factory

#### Other Applications

#### Meeting all expectations

Hospitals

Schools

#### Airports

# INDEX

Single unit

Modular units

# **High Efficiency**

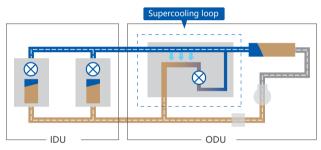

#### High Efficiency Enhanced Vapor Injection(EVI)Compressor

The enhanced vapor injection DC inverter compressor increases refrigerant circulation and improves both cooling and heating capacity.

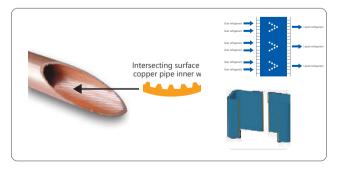

#### Two Stage Subcooling

Plate Heat Exchanger as a secondary intercooler boosts up refrigerant subcooling, achieving 12°C stage-1 subcooling, and 20°C stage-2 subcooling. The total subcooling degree reaches 32°C.

#### High Efficiency double C-Type Heat Exchanger

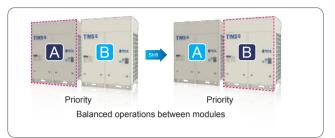

- High efficiency copper pipe with internal thread
- Corrugated fins with openings ,increasing heat exchanging area 15%.
- Specially designed TWO-TO-ONE refrigerant loop, decreasing refrigerant flow resistance.
- Double C type heat exchanger with 6 sides heat exchanging.

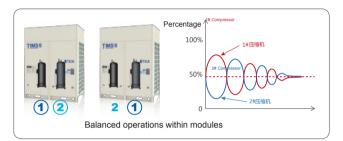

# **High Reliability**

#### Duty Cycling

Duty cycling equalizes the running time of the outdoor units in a multiple-unit system and of the compressors in each unit,significantly extending compressor lifespan.

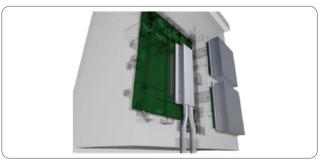

#### 8-Stage Oil Return

Eight stages oil return technology ensure safe and reliable running of the system and achieve 99.99% oil return.

- Compressor internal oil separation and return technology
- Staged oil storage
- Speed-difference cyclone-type centrifugal oil separation
- Equal-resistance gas-liquid separator
- No oil balance pipe
- Smart oil balance design
- Precise oil return control
- Dual-mode intelligent oil return control

#### Micro-HEX technology

With the innovative Micro-HEX refrigerant-cooling scheme and the unique aluminum board heat dissipation technology, the temperature difference between the IPM module and the refrigerant (usually 30~55°C) can be reduced to less than 5°C, guaranteeing the stable and safe running of the control system.

#### Back-up Operation

#### • Compressor back-up

When one of the ODU compressors is faulty, the other compressor can start emergency operation.

#### • Frequency converter back-up

When one of the ODU frequency converter is faulty, the other one can start emergency operation.

#### • Fan back-up

When one of the ODU fans is faulty, the other fan can start emergency operation.

#### Sensor back-up

Equipped with 28 sets sensors + 7 sets VR sensors. When one sensor is faulty, can be replaced with other sensors.

17	•18		
		6 28 3 5 16	

#### • Unit back-up

For a modular unit, when one of the ODU is faulty, the other ODU can start emergency operation.

#### Electrical Components Highly Integrated Design

Multiple electrical components are integrated into a single board, the integrated design can reduce the wiring connections greatly, making the electrical wiring more simple and reliable.

#### Precise detection of refrigerant pressure

The high/low pressure sensor is used to monitor the system refrigerant pressure in real time and make sure that the pressure perfectly fit the DC inverter module, thus guaranteeing more stable operation of the unit.

#### Multiple Protection Function

Multiple protection function, such as safe ground protection, voltage protection, temperature protection, current protection, pressure protection, compressor overload protection, motor overheat protection, etc., ensuring the system consistently safe and reliable operation.

#### Auto Snow-blowing Function

The innovatively designed auto snow-blowing function enables the outdoor unit to prevent the accumulation of snow by itself.

The innovatively designed dust-clean function enables the outdoor unit to prevent the dust by itself.

#### Anti-corrosion Protection

• To meet the requirements in severe conditions with high humidity and high level of salt fog in places near seas and rivers, TICA ODU casing adopts thickened sheet metal and multiple advanced spraying techniques to effectively improve the corrosion resistance performance and extend the service life of the air conditioning unit.

Screws / bolts / gaskets 500h of neutral salt mist

Fan motor Standard :300h of neutral salt mist Special: 500h of neutral salt mist

#### Wide Operation Range

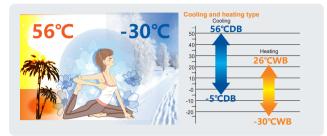

#### Wide Capacity Range

TICA VRF has an extensive capacity ranging from 3HP to 102HP, meeting all customer requirements from small to large buildings.

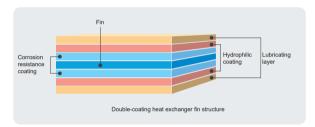

#### Wide Temperature Range

With an ultra-wide operating range of the ODU (cooling: -5°C to +56°C; heating: -30°C to +26°C), the unit can flexibly respond to the changing outdoor temperature with enhanced stability and applicability.

• The corrosion-resistant layer can effectively slow down the corrosion of heat exchanger by corrosive gases. Thanks to the hydrophilic layer, frosting is less likely to happen during heating operation of the air conditioner, and the drainage during defrosting is more convenient. The lubricating layer can break the surface tension of water, speed up the dropping of condensing water or frostturned water.

• The IDU panel passed the anti-aging test. This ensures that, in everyday use, the panel does not age under strong UV, high temperature, or high humidity conditions.

#### Wide Range of Indoor Units

TICA provides 16 types and more 170 models of VRF indoor units to meet varied customer requirements in a wide range of locations including offices, shopping malls, hospitals and cinemas.

### **Enhanced Comfort**

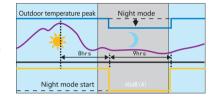

#### Advanced Silent Technology

#### 16 professional noise reduction technologies

- 1 High-efficiency low-noise DC inverter compressor
- 2 Stepless brushless DC motor
- 3 Motor bracket with off-resonance framer
- Unique air injection noise reduction
- 5 Omni-directional acoustical enclosure
- 6 New guide ring
- 750mm large fan
- 8 Refrigerant flow noise reduction

#### 3 silent modes

Night silent mode Forced silent mode Smart silent mode

#### Intelligent Defrosting Technology

#### TCC defrosting

The innovative TCC defrosting technology of TICA adopts the non-stop method for defrosting. Modular units do not need to switch to the cooling mode for defrosting in winter. (patent No.: ZL 2013 2 0344961.5)

#### Smart defrosting/defrosting self-adapting

Temperature sensors and pressure sensors in the system can effectively reduce the times of defrosting, prolong the heating period, and improve the heating efficiency. The defrosting duration can be shortened to 3 to 5 minutes.

#### Anti-frosting at the bottom

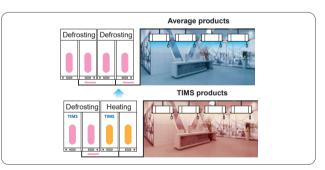

The ice water mixture at the bottom of unit can be completed removed during defrosting in heating mode in winter, so as to avoid impact on the heating capacity, improve the unit stability, and shorten the defrosting duration by 30%.

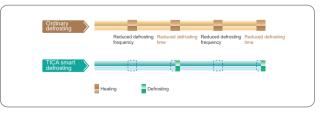

- 9 Low noise priority mode
- 10 Three silent modes: Smart/Night/Forced Silent
- 11 Compressor jet loop noise reduction
- 180° sine wave control for quiet operation of compressor
- (13) 3D simulation pipe vibration reduction
- 14 Streamlined air outlet grille
- 15 ODU casing anti-vibration design
- 16 Fan anti-vibration with CFD

#### Multiple Priority Modes

Multiple priority modes settings, provide more freedom and convenience to match the customer needs.

#### Auto Addressing

Outdoor units can distribute addresses to indoor units automatically. Remote and wired controllers can be used to guery or modify each indoor unit's address.

#### Maintenance Fucntion

The maintenance function allows the shutdown of some indoor units without shutting down the whole VRF system. the maintenance function can be activated on site during maintenance period as the remaining indoor units continue to operate.

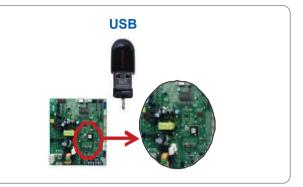

#### Four-Way Piping Connection

A four-direction space is available for connecting pipes in various installation sites.

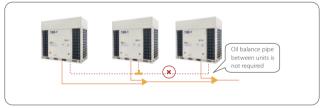

#### Black Box Technology

The professional "black box" data saving device is provided to store data related to unit operation of up to ten years. In this way, data can be read conveniently during aftersales maintenance and debugging. Program upgrade can be intelligently completed by directly inputting the control program to the black box through relevant ports.

#### Oil Balance Pipe Not Required

With the new oil management system, there is no need of oil balance pipe.

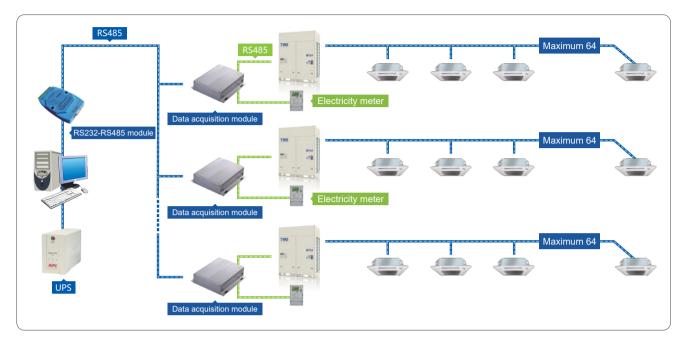

#### High External Static Pressure

The static pressure of the outdoor unit can be up to 110Pa which facilitates installation of the unit on each floor of high-rise building or on balconies.

#### Household-Based Charging System

For large apartments, hotels, multi-storey tenants, TICA can provide professional electricity billing system, according to the operation of indoor and outdoor machines, electronic valve opening and other information, to achieve scientific and reasonable data division.

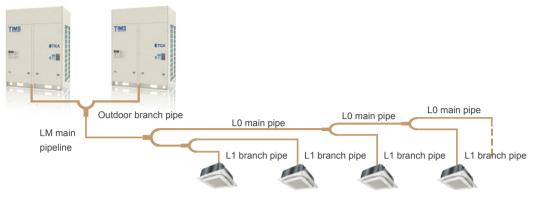

#### Intelligent Interlocking For Hotels

Hotel door card can be selected in the application scenarios such as hotels. When the door card is inserted, the IDU can be controlled freely; when the door card is removed, the IDU is turned off automatically after a delay, making hotel management convenient and saving power.

ODU main pipe and IDU branch pipe are selected based on the specifications table. When longer pipes are required, refer to the installation manual.

#### Main pipeline design for modular series

# **TIMS Ark Series Heat Pump**

Optimized design for small to large buildings

- Enhanced Vapor Injection (EVI) Compressor
- High Efficiency Double C-Shape Heat Exchanger
   ESP up to 110Pa
  - Two Stage Subcooling
- Eight Stage Oil Return
- Multi Silent Technologies
- Duty Cycling
- Auto Addressing
- Backup Operation
- Multi Protectior
- Anti-Corrosion
- Micro-HEX Technology
- TCC defrost with non-stop
- Auto Snow-blowing Function
- Dust-clean Function
- Precise detection of refrigerant pressure
- Black Box Technology
- **BMS**
- Household-based charging system
  - Intelligent Interlocking for Hotels

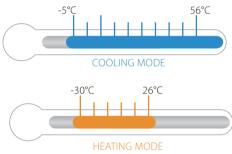

#### Wide Capacity Range

Starting at 8HP, capacity increases in 2HP increments up to 102HP.

#### Wide Operating Temperature Range

TIMS Ark VRF can operate stably in a wide ambient temperature range: from -5°C to 56°C in cooling mode and from -30°C to 26°C in heating mode.

#### Long Piping Capability

Piping length	Capabllity (m)
Maximum actual single piping length	200 m
Maximum equivalent single piping length	240 m
Maximum piping (total)	1100 m
Maximum height difference of IDU and ODU	110 m
Maximum height difference of IDUs	30 m
Maximum allowed length pipe after the first branch pipe	90 m*

1. The nominal cooling capacity is measured under the following conditions: indoor temperature of 27.0 °C DB/19.0 °C WB; outdoor temperature of 35.0 °C DB; equivalent refrigerant piping length 10m with zero level difference.

2. The nominal heating capacity is measured under the following conditions: indoor temperature of 20.0 °C DB; outdoor temperature of 7.0 °C DB/6.0 °C WB; equivalent refrigerant piping length 10m with zero level difference.

Notes:

1. The nominal cooling capacity is measured under the following conditions: indoor temperature of 27.0 °C DB/19.0 °C WB; outdoor temperature of 35.0 °C DB; equivalent refrigerant piping length 10m with zero level difference.

2. The nominal heating capacity is measured under the following conditions: indoor temperature of 20.0 °C DB; outdoor temperature of 7.0 °C DB/6.0 °C WB; equivalent refrigerant piping length 10m with zero level difference.

Notes:

1. The nominal cooling capacity is measured under the following conditions: indoor temperature of 27.0 °C DB/19.0 °C WB; outdoor temperature of 35.0 °C DB; equivalent refrigerant piping length 10m with zero level difference.

2. The nominal heating capacity is measured under the following conditions: indoor temperature of 20.0 °C DB; outdoor temperature of 7.0 °C DB/6.0 °C WB; equivalent refrigerant piping length 10m with zero level difference.

# **TIMS Extra Series Heat Pump**

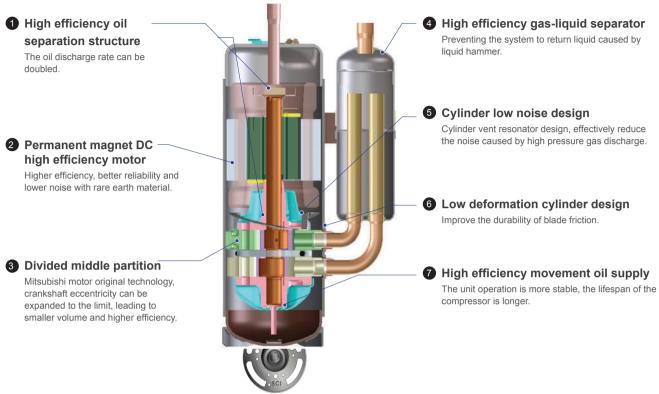

Optimized design for middle-sized <u>buildings</u>

Side-discharge and Top-discharge Options

- Twin rotary DC inverter compressor
- ESP up to 110Pa (Top-discharge units only)
- Two Stage Subcooling
- Six Stage Oil Return
- Multi Silent Technologies
- Auto Addressing
- Multi Protection
- Anti-Corrosion
- Micro-HEX Technology
- Dust-clean Function
- Precise detection of refrigerant pressure
- Black Box Technology
- BMS
- Household-based charging system
  - Intelligent Interlocking for Hotels(Top-discharge units only)

#### DC inverter compressor

All series units adopt Mitsubishi twin rotary compressor with many Mitsubishi patented technologies.

#### Wide Capacity Range

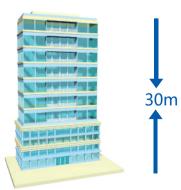

TIMS Extra has two options, side-discharge and top-discharge. For side-discharge type, it has three models, 25.2/28.5/33.5kW. For top-discharge type, it has five models, 25.2/28.5/33.5/40.0/45.0kW.

Side discharge type	Top disch	narge type		
25.2/28.5/33.5kW	25.2/28.5/33.5kW	40.0/45.0kW		
	TIMSS etick	TIMES enc.		

#### Long Piping Capability

Maximum piping (total)	1100m
Maximum equivalenFsingle piping length	240m
Maximum height difference of IDU and ODU	110m
Maximum height difference of IDUs	30m

# VRF Mini Series Heat Pump

# Optimized design for small buildings

- Capacity Up to 22.4kw
- Connectable Indoor Units Quantity up to 11
- Micro-HEX technology
- Oil return without shutdown
- Intelligent defrosting technology
- Advanced silence technology
- Compact, easy installation

#### DC inverter compressor

All series units adopt Mitsubishi twin rotary compressor with many Mitsubishi patented technologies.

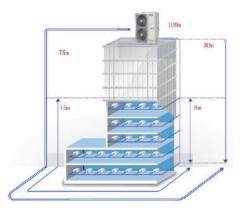

#### • Wide Capacity Range

	Mini series	
8kW	10-16kW	18-22.4kW

#### Long Piping Capability

Maximum actual length of single pipe	50m
Maximum equivalent length of single pipe	75m
Maximum total equivalent pipe length	100m
Maximum drop of indoor/ outdoor unit	30m
Maximum drop of indoor unit	8m
Maximum permitted length after first branch	15m*

\* Pls consult the detailed technical documentation or other matters with the relative technicists.

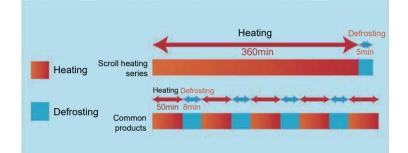

#### Compact design

Compact design with three-side heat exchanger, can be easily installed in a small space such as a bay window.

#### Intelligent Defrosting

The patented defrosting technology of TICA can increase the refrigerant circulation flow during defrosting, which will shorten the defrosting time and cut down the power consumption.

#### Oil Return On Heating Operation Without Shutdown

TICA adopt on-demand oil return and high/low frequency switchover oil return to prevent wild fluctuation of indoor temperature, and provide user with more comfortable experience.

Notes:

The combination mode is recommended, and you can choose the combination mode freely.Maximum 3 modules can be combined.
 The nominal cooling capacity is measured under the following conditions: indoor temperature of 27.0 °C DB/19.0 °C WB; outdoor temperature of 35.0 °C DB; equivalent refrigerant piping length 10m with zero level difference.
 Fuse or circuit breaker is selected based on MFA. Electrical wiring is selected based on MCA.

# **One-way Cassette**

## COMFORT

#### **Quiet Operation**

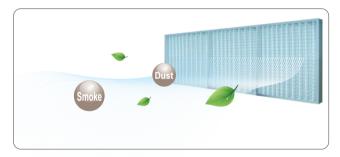

The compact turbo fan adopts axial air intaking. Small blades ensure even air supply and substantially reduce noise for a quiet and comfort environment.

# ► HEALTH

#### **Exclusive Sterilizing Filter**

The unique sterilizing filter can effectively filter smog and dust from air, to provide users with fresh air all the time.

# ► AIR FLOW

#### Wide air supply outlet

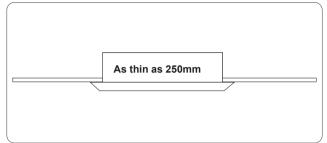

Fan deflector may provide wide range air supply of 10-65°, creating cozy living environment indoors and comfortable feeling of wide angle.

## ► EASY INSTALLATION

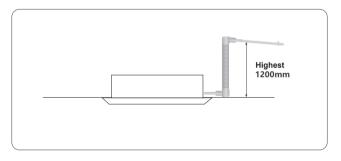

#### Easy Installation

Body thickness of 250 mm installed in a concealed way to lift the height of the suspended ceiling, especially suitable for ceilings with narrow height.

#### **High-lift Drain Pump**

Built-in with a fully-automatic drain pump. Pumping head is up to 1200mm, flexible for drainage pipe design.

# **Round Flow Cassette**

## COMFORT

#### **Quiet Operation**

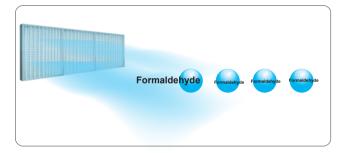

The use of aerospace technology on 3D spiral fan blades with optimized air duct design reduces internal resistance of the unit and achieves ultra-quiet operation, creating a comfortable and pleasant environment.

Diffuser	
3D spiral fan blade	

# ► HEALTH

#### Health

PM2.5, formaldehyde and antibacterial filters are to provide super-clean indoor environment.

# ► AIR FLOW

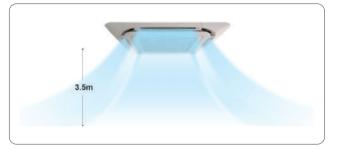

#### 360° Air Flow

360° air flow design features more reasonable airflow distribution and more uniform temperature in the entire room for improved comfort.

#### **High Ceiling Installation**

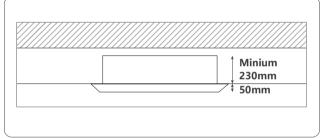

The air supply is not limited by the floor height. The cold air can reach the ground in a room of up to 3.5 m high to achieve optimum air conditioning performance.

## EASY INSTALLATION

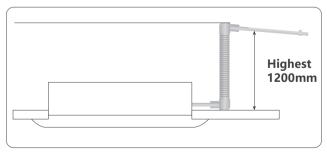

#### **Compact Size**

The height of models 28 to 80 are just 230mm whilst models 90 to 160 are 300mm, making the round flow cassette idea for standard ceilings.

#### **High-lift Drain Pump**

Built-in with a fully-automatic drain pump. Pumping head is up to 1200mm, flexible for drainage pipe design.

# Slim Duct

# COMFORT

#### **Quiet Operation**

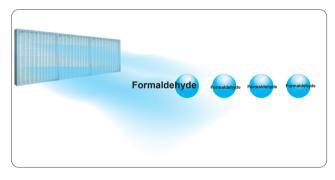

Use the brand-new CFD optimized duct and simulated fan blades to ensure softer air supply, and the auxiliary streamlined embedded foam wiring drain pan lowers noise of eddy current to 23 dB, equal to the normal human breathing sound.

# ► HEALTH

#### Health

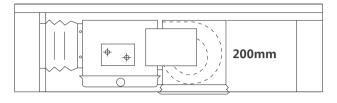

PM2.5, formaldehyde and antibacterial filters are to provide super-clean indoor environment.

## **EASY INSTALLATION**

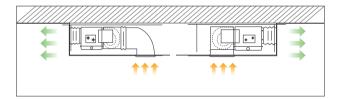

#### **Compact Size**

Designed with 200 mm thickness, the body is lighter and the installation space required is smaller, making it suitable for more small spaces.

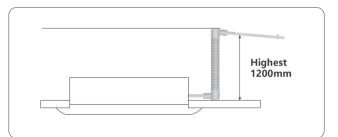

#### Diversified air return mode

The air return plenum as standard configuration may change air return mode based on the actual circumstances at the site to enable more flexible air return.

#### High-lift Drain Pump

Built-in with a fully-automatic drain pump. Pumping head is up to 1200mm, flexible for drainage pipe design.

## COMFORT

#### **Quiet Operation**

The fan motor of delicate and compact design equipped with brand-new propeller housing with vibration absorption function delivering operating noise as low as 33dB(A) to satisfy rigorous noise requirements at different sites.

## AIR FLOW

#### **Brushless DC motor**

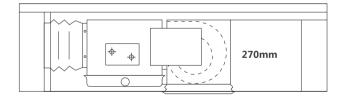

Brushless DC motor free of excitation loss and carbon brush loss, with the energy efficiency 30% higher than AC motor.

# EASY INSTALLATION

#### **Compact Size**

Thickness of only 270mm installed in a concealed way to lift the height of the suspended ceiling, especially suitable for ceilings with narrow height of suspended ceilings.

# ► HEALTH

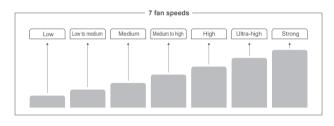

#### Health

Can be equipped with HYplus TP04/05/06 purification module as optional.(Changeable ESP type only)

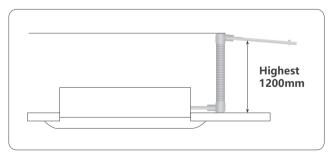

#### Seven fan speeds, up to 100Pa static pressure

Multiple noise reduction measures and seven fan speeds can achieve low-noise operation for a quieter environment(as low as 33dB (A)).

#### High-lift Drain Pump

Built-in with a fully-automatic drain pump. Pumping head is up to 1200mm, flexible for drainage pipe design.

# Medium static pressure duct

# High static pressure duct

## COMFORT

#### **Quiet Operation**

Brand-new noise reduction technology effectively reducing noises of the unit to provide quiet and pleasant environment.

# AIR FLOW

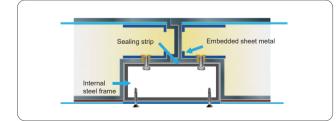

#### Ultra-high static pressure design

The external static pressure reaches 200-300Pa, making it possible to connect long air duct to realize long distance air supply, especially suitable for scenarios needing air supply by long air ducts.

#### High-end double-wall design

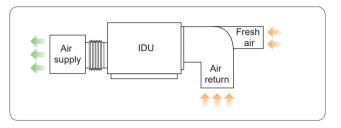

All the metal parts in the cabinet are isolated from outside metal parts, using polyurethane foam and specially designed sealing strips, avoiding the thermal insulation strips attached inside the common product to prevent condensation. Cold bridge and dripping are resolved, and the system noise is lower.

# ► HEALTH

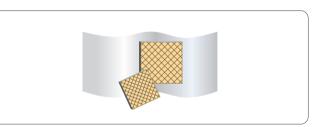

#### Intake fresh air to improve air quality

Small amount of outdoor fresh air can be introduced through the air duct to ensure the quality of room air.

#### Customized air purification program as optional

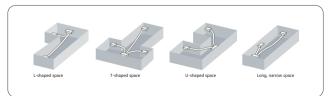

Customized air purification program, the antibacterial filtering layer including photocatalyst and activated carbon can effectively remove odors, dust, smoke, and formaldehyde, benzene and other hazardous substances in decorative materials to create a comfort room with fresh air.

# EASY INSTALLATION

#### Various air supply modes

Choosing different air supply modes as per room structure, one IDU of air conditioner can meet the diversified space requirements.

#### Hidden installation and elegant appearance

The IDU and duct are in the ceiling and can fit into the interior decoration perfectly.Specifications

# Wall Mounted

# COMFORT

#### Quiet Operation

Brand-new highly efficient noise reduction motor built with the latest technology minimizing the noise of IDU.

# ► HEALTH

#### Wide air flow

The unique two-layered auto swing providing wider air supply range to optimize air flow compared to conventional units.

### ► EASY MAINTENANCE

#### Removable air return panel

The removable air return outlet panel facilitates the cleaning of filter and panel.

## Wall-mounted

# Celling & Floor

# COMFORT

#### **Quiet Operation**

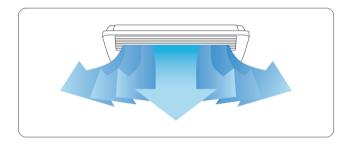

Unequally spaced oblique angle large diameter through flow fan is used to ensure strong air supply, lower fan speed and lower energy consumption.

## AIR FLOW

#### Wide air flow

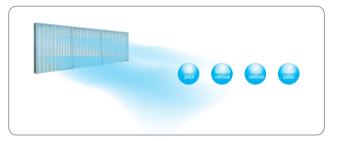

Auto wide-range air supply guaranteed gentle, natural, and even air flow. Various air supply modes are available. Anti-cold wind design ensures more comfortable air supply in winter.

# ► HEALTH

#### Health

An efficient filter device is equipped to completely filter dust, smoke and other small particles in the air, effectively preventing bacteria breeding and thoroughly improving the air quality.

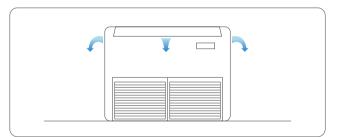

## EASY MAINTENANCE

#### Removable air return panel

The removable air return outlet panel facilitates the cleaning of filter and panel.

#### Single-side maintenance

All maintenance work and the removal of fan and motor can be implemented through the access hole on the side.

# Full-fresh air handling unit

# HEALTH

#### Intake fresh air

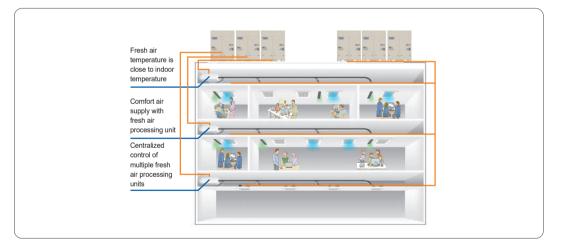

Intake fresh air to make the outdoor air close to room temperature through the indoor heat exchanger and the powerful heating/cooling capacity, so as to meet various requirements.

# AIR FLOW

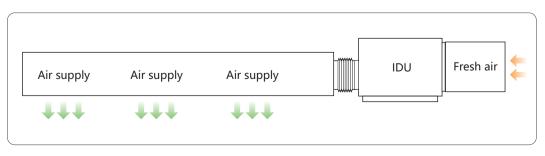

#### Multi-split unit for multi-point air supply

Air outlets can be flexibly configured to meet the requirements for multi-point air supply.

#### 300Pa ultra-high static pressure

All fresh air handling unit has the static pressure up to 300 Pa, making it possible to connect extra-long air duct to realize long distance air supply and bring fresh and clean air to indoor places.

# Full-fresh air handling unit

# Heat Recovery Ventilator (HRV)

### Multiple haze removal

#### Must-have for haze removal

- Filtering offers layers of protection.
- The maximum PM2.5 removal rate is 95%.

#### Highly efficient energy recovery

#### Efficient heat exchange core

- The heat recovery core is formed by cross-laminating and rotating the single-sided corrugated, parallel paper sheets by 90°, with two mutually vertical and non-interfering channels. The fresh air and return air are able to exchange heat and humidity without being mixed when passing the two channels.
- With the latest technology of Japan, the parallel paper is even and tight, and boasts a heat recovery rate of 80%.

## Specifications

## Omni-directional air replacement

#### Fresh air enjoyed without opening the window

The unit is ceiling-mounted in places not that noisesentimental. With all air ports put indoors, it can ensure that air is supplied and discharged evenly and smoothly.

#### Patent structure and low air leakage rate

The junction part of the unit uses aluminum profile with a concave groove and a convex groove and is secured with bolts and nuts to form a patented labyrinth sealing structure, achieving the air leakage rate as low as 0.029% - only 1/66 of the air leakage rate allowed in the national standard and realizing lower operating costs.

#### High efficiency and energy saving

The full core heat exchanger achieves high heat exchange efficiency, temperature efficiency as high as 70% and enthalpy efficiency as high as 60%.

#### Elimination of cold bridge and rust

All the metal parts in the cabinet of TICA's high-capacity duct IDU are isolated from outside metal parts using polyurethane foam and specially designed sealing strips, avoiding the thermal insulation strips attached inside the common product to prevent condensation. Cold bridge and dripping are resolved, and the system noise is lower.

#### Safe and reliable

The direct driven fan does not require maintenance. Only the filter needs to be cleaned regularly.

# High-end series fresh air ventilators

### Wide application

Wide air flow range: 1000m3/h~6000m3/h Model models: Two-way ventilation and energy recovery Apply to occasions such as residences, meeting rooms, labs, offices, equipment rooms, restaurants and gyms.

## **High reliability**

Structural design: The product is designed with a sheet metal structure, with insulation cotton attached inside.

#### Easy installation

Convenient installation: The machine is positioned in the ceiling and does not occupy the indoor effective space.

# Intelligent Control

# Provide you with convenient services

#### Wireless Remote Controller

Mode Setting: Cool/Heat/Dry/Fan/Auto Scheduled power-on/off Temperature setting Fan speed setting: High/Medium/Low/Auto Eco/Quiet/Sleep functions Vertical swing/Horizontal swing

TMC311

#### Wired Remote Controllers

86×86mm panel, LED Error reporting ON/OFF, swing, memory function, etc. Cool/Heat/Auto/Fan/Dry modes Temperature setting, timer power-on/-off Touch keys Filter cleaning reminder Background light

#### Central Controllers

8-inch colored touchscreen

Supports centralized control of a maximum of 64 IDUs in 8 systems

Setting, management and monitoring (set temperature,air flow) of IDU

Accessible to IDU/ODU network

Schedul control by week/month/year

Unified management of IDU groups

Statistics of changes in running statuses of all devices in a certain time period.

Fault display, parameter status query, device query, and permission management

Display of indoor environmental indicators (IDU needs to be equipped with sensor nodes)

TMC315/TE300

OCPAD

# **Building Management System (BMS)**

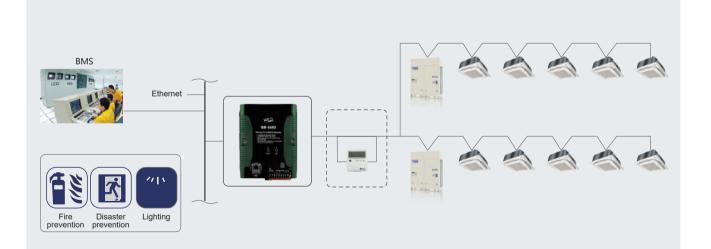

- TIMS adopts multiple BMSs to access to the BAS for comprehensively auto control.
- TICA BMS supports access via ModBus. Up to 1024 IDUs and 16 ODUs can be connected.

#### Basic control functions

- AC on/off, operation, and monitoring the operation status
- 2 Monitoring the IDU error code
- 3 Monitoring and setting the IDU temperature
- 4 Monitoring and switching the operating mode
- 5 Remote controller lock function
- 6 Service monitoring
- 7 Auto running

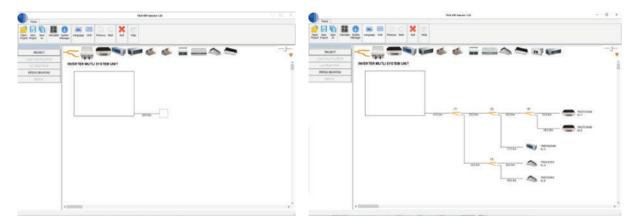

- 8 Mode lock function, user can lock the running mode of indoor unit
- 9 Free management by group
- 10 Complete schedule management
- 1 Historical data records
- 12 Schedule control by week/month/year
- 13 Centralized control function
- 14 Interlock control (fire alarm, door lock, fault, etc.)

# Intelligent software

#### Selection software

TICA dedicated to provide the best HVAC engineering support and solutions focused on effectively designed, built, supervised and maintained throughout the lifecycle, providing our customers a faster, easier, and a more accurate way in everyday duties.

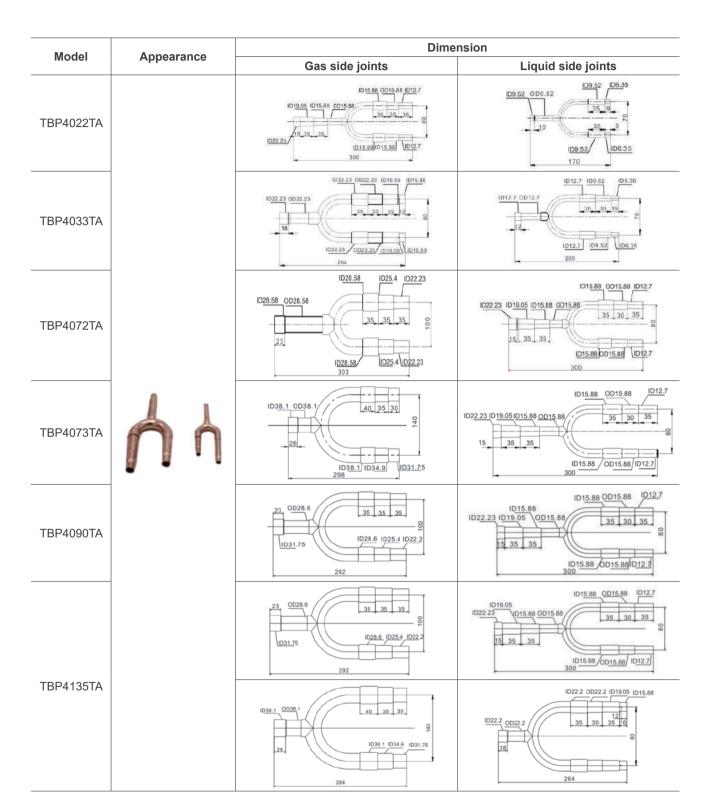

#### Management software

The IDUs are connected to a computer by the data acquisition module, so that full centralized control can be implemented on this management software. The control function is very powerful, and operations are simple and clear. One set of software supports up to 32 systems and 2048 IDUs for large-scale centralized control. The control signal of data acquisition module can reach up to 1200 m.

- Free management by group
- Complete schedule management
- Historical data records
- Schedule control by week/month/year
- Centralized control function
- Centralized control over air conditioning systems in multiple buildings at the same place
- Permission setting
- Temperature setting, timer power-on/-off
- Error reporting
- Interlocking control
- Remote management
