

DC Brushless Fan Coil Unit

Quiet Efficiency

Noise low as 20 dB (A)

Pure Comfort

Room temperature $\pm 0.5^{\circ}\text{C}$
stepless regulation

LAUNCH

With the brushless DC motor bringing energy efficiency and low noise, this air conditioner can be widely used in high-end hotels, office buildings, apartments, hospitals and other scenarios with special needs for low noise.

Compact, Light, Flexible and Elegant

The product is compact in structure, with depth as low as 470 mm and thickness as low as 230 mm. It is especially suitable for restricted ceiling space and can save building floor height.

Highly Efficient and Eco-Friendly

Highly efficient brushless DC motor is used with low wind resistance energy-saving heat exchanger to achieve higher efficiency. During operation, the energy consumption can be greatly saved during low load period through stepless regulation of speed.

Low Noise, Exceptional Comfort

The motor features UHF drive emitting only very low noise, and the fan adopts large impeller achieving low speed. Selected noise insulation materials are used with unique intelligent mute control logic, so that the operating noise can be as low as 20 dB (A).

Safe and Reliable Drainage Pan

The pan is formed using one-off processing technology without any welds and processed with anti-corrosion treatment; The thermal insulation material at the bottom has no joint and no condensation problem. The fire protection rating is non-flammable, so it is safe to use.

Changeable External Static Pressures

The user can quickly convert among external static pressures 12Pa, 30Pa and 50Pa through a DIP switch at the installation site to meet different applications.

Network Intelligent Temperature Control

Equipped with RS485 interface, and supporting Modbus communication protocol, this air conditioner can be connected to automatic control system of the building for centralized management to realize functions such as remote power on/off, mode setting, and operation monitoring for convenient operation management and energy saving.

- Black or white optional
- Electric valve and fan controllable
- Temperature sensor built-in to display the indoor temperature
- Both 2-pipe and 4-pipe models applicable
- Embedded functions such as child lock, power-off memory, anti-freeze protection, and sleep mode

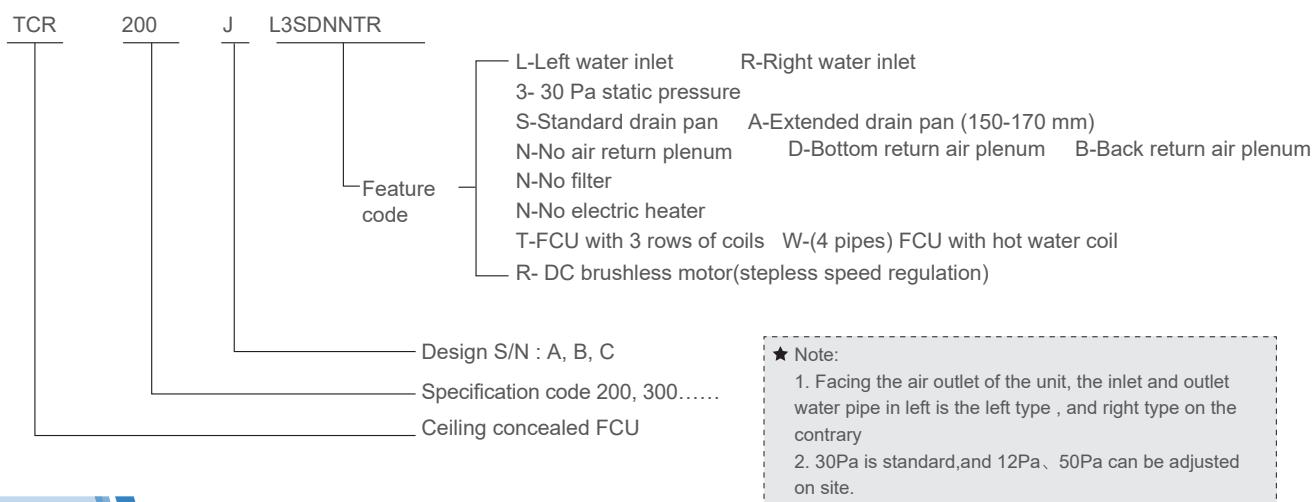

Simple Electronic Control Configuration

Easy to operate, four-speed flexible wind control (high, medium, low, mute), and intelligent stepless regulation in auto-speed mode.

Convenient Installation

The product can be selected as left type or right type, and the type can be adjusted at the installation site; The air return type can be selected as back return or bottom return, and the air return direction can be switched at the installation site.

	Height (mm)	230	230	230	230	230	230	230	250	292	

★ Note:

1. Cooling: supply water and return water temperatures 7/12°C; the dry/wet bulb temperature of air inlet is 27/19.5°C;
2. Heating: supply water is 60°C or 45°C, water quantity being the same as during cooling; air return conditions: the dry bulb temperature of air inlet is 21°C;
3. In the table, low static pressure indicates the air outlet static pressure at 0Pa (with air outlet and filter) and at 12Pa (without air outlet and filter);
4. The air flow in the table is obtained when the unit is running in dry state and the dry bulb temperature of air inlet is 20°C;

- 5.The noise in the table is measured in a semi-anechoic chamber with background noise of 11.5dB(A).
6. Left & right swing manner can be adjusted on site. After adjustment, the cooling capacity and heating capacity should be multiplied by the correction factor 0.9;
- 7.Specifications are subject to change without notice due to product improvement, please refer to the nameplate of the unit.

Wiring diagrams

Thermostat(2-pipes)

Thermostat(4-pipes)

★Note:

- The wire connection of unit must be correct, otherwise, the motor may be burnt out.
- Wiring to be implemented by the customer is indicated in the dashed frame. Shielded twisted pair cables are used for communication cables and signal cables.
- Voltage, frequency and phase of the power supply must be consistent with the unit requirements, and the power supply is 220V, single phase. The supply voltage deviation should not exceed 10% of the rated voltage.
- Unit of 4 pipes, the cold water valve should be connected to V1, and hot water valve should be connected to V2.
