Inverter VRF System and Mini VRF System TICA

About TICA

TICA is a hi-tech enterprise specialized in R&D, manufacturing, sales and services of air-conditioning and refrigeration products. Established in 1991, it has developed into one of the top four Chinese air-conditioning brands, with factories in Nanjing, Tianjin and Guangzhou, and a network of over 70 sales and service offices around the world.

TICA has invested up to RMB 600 million in the first phase to build the top notch central air-conditioning R&D and production base, credited as the state enterprise R&D center. Certified by CNAS, it serves as a national R&D public service platform.

TICA produces over 30 series of products, covering AHUs, VRFs, screw chillers and centrifugal chillers, diverse enough to meet various requirements with regards to comfort and manufacturing processing application.

TICA is a strong competitor in chillers and commercial air conditioning products. It is the largest producer of AHUs in China for five consecutive years and covers over 40% of the market share as the supplier to such industries as micro-electronics, surgery operation room equipment and biopharmaceuticals.

TICA Vision

Strive to be the international leading integrated system and service provider in clean environment and utilization of thermal energy

TICA Mission

Persist to maximize the value for customers through innovative technology and provide clean environment in order to improve the quality of life

TICA VRF Unit Development History

The TIMS-AXA strong heating modular full inverter VRF unit was put on the market. 2018

The TIMS-AS+ strong heating independent full inverter VRF unit was put on the market. 2017

The TIMS-S independent full inverter VRF unit was put on the market. 2015

The TIMS inverter VRF unit was put on the market. 2014

The TIMS inverter VRF unit developed by Japanese experts was introduced. 2010

The V6 series digital scroll VRF unit was unveiled. 2007

The V series digital scroll VRF unit was developed successfully. 2006

TICA & UTC Global Strategic JV

On October 9, 2015, official signing of the legal JV Agreements with United Technologies Corporation (UTC)

UTC will provide TICA with advanced global leading core technologies, such as cryogenic power system (ORC), centrifugal and screw chiller, to enable TICA's centrifugal technology ahead of its peers for two decades and its ORC technology for three decades. Both parties will integrate the global networks to come up with a new market strength.

UTC Aerospace Systems

Pratt & Whitney

The largest supplier of HVAC and refrigeration equipment in the world

The largest supplier and service provider of elevator and escalator in the world

Company Profile

More than 70 branches

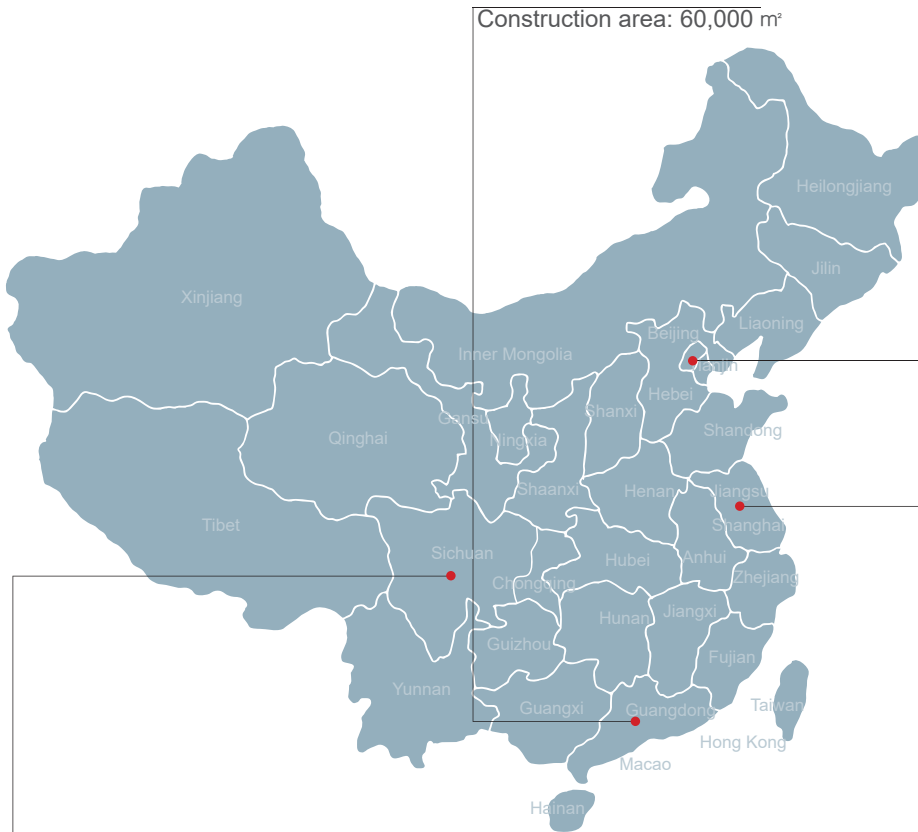

5 manufacturing bases

8 factories

Guangzhou Base

Construction area: 20,000 m²

Kuala Lumpur Factory

Floor Area: 10,000 m²

Nanjing FUCA Automation

Technology Co., Ltd.

Construction area: 10,000 m²

Honor and Awards

- ★ Individual Product Champion Enterprise Accredited by NMII (Only one in manufacturing sector), with the champion product of air handling unit
- ★ National Green Industry Building, No.001 in China (first one in China)
- ★ First enterprise to achieve the HCFC Phase-out Project in China
- ★ Vice Chairman Member of China Refrigeration and Air-conditioning Industry Association
- ★ Chairman Member of Clean Room Technology Committee, CRAA

- ★ National-Recognized Enterprise Technology Center (Jointly certified by the National Development and Reform Commission, Ministry of Science and Technology, Ministry of Finance, General Administration of Customs, and State Administration of Taxation)
- ★ Enterprise Academician Workstation
- ★ Postdoctoral Programme
- ★ Awarded Nanjing Mayor Quality Prize in 2016
- ★ Jiangsu Manufacturing Outstanding Contribution Award in March 2017 published on a government notice (Smart Manufacturing Enterprise)

First-class manufacturing facilities

China's most advanced VRF line based on Japanese technology
Japan Murata sheet metal fabrication center
Germany Wagner fully automatic spraying line
CombiCut plasma cutting machine;
Self-built central gas/liquid transport zone

Environmental Control Lab

ISO class 1 ultra clean integrated environmental system

Integrated purification for operating room

Air purification analytical lab

Indoor air flow field visualization and measurement system

The largest air volume test platform in the industry (120,000 m³/h)

Noise Laboratory

Testing Benches for Central AC

2000RT Water-cooled Chiller Test Lab

350RT Air-cooled Chiller Test Lab

100Hp Long-running reliability lab (water)
150Hp Long-running reliability lab (fluorine)

Highway transportation simulation test platform

Environment simulation lab from -40°C ~55°C & snowfall simulation

Raining simulation lab

Widely Operating Range of Cooling and Heating

Through the strict system matching and test, the system has very powerful cooling and heating performance, even operates under -25°C during cold winter or 54°C in summer.

Overlong Pipe & High Drop Design

- Maximum actual length of single pipe 200 m
- Maximum equivalent length of single pipe 240 m
- Maximum total equivalent pipe length 1100 m
- Maximum drop of indoor/outdoor unit 110 m
- Maximum drop of indoor unit 30 m
- Maximum permitted length after first branch 90 m

* Pls consult the detailed technical documentation or other matters with the relative technicians.

TIMS

- High efficiency 7
- High Reliability 10
- Convenient Application 15

High Efficiency

All DC Inverter Compressors

The TIMS adopts the high-efficiency DC inverter scroll compressor with high-pressure chamber, which adopts asymmetric scroll design and high-efficiency internal oil separator. By integrating with the enhanced vapor injection technique, the TIMS can realize the heating under low ambient temperature in winter, and save more energy. The kind of system can run more stably and reliably.

Stereo Air Inlet Technology of Four Directions

In comparison to air inlet through three sides, the stereo air inlet technology of four directions can maximize utilization of the heat exchange area of heat exchanger, increase the air speed range, make heat exchange more sufficient, and improve the operation efficiency.

EVI technology

When the ambient temperature reaches the limit condition, the heat exchange capacity of the outdoor unit declines, and the air return volume of the compressor is reduced, accompanied by problems in compressor suction and discharge protection. The TICA TIMS VRF unit adopts the high efficiency EVI system and cooperates with TICA's new inverter control and refrigerant system. In the unit, refrigerant is added through the air jetting port to increase the displacement, so as to broaden the cooling and heating ranges of the unit, enhance the overall capacity by 20%, and achieve the cooling capability without attenuation at 40°C and the heating capacity without attenuation at -15°C. In addition, the added refrigerant is injected into the pressure chamber of compressor to reduce the compression ratio and power consumption of the compressor, and improve the COP value by 10%. The low-temperature gaseous refrigerant inhaled by the air jetting port effectively reduces the temperature for the compressor and ensures high efficiency as well as more stable and reliable operation of the compressor.

Refrigerant cooling technology

The inverter will produce a lot of heat. A high temperature may reduce the operating speed of the unit and affect system stability. In addition to the conventional air cooling technology, the TIMS also adopts the most advanced refrigerant cooling technology to use the condensed refrigerant (typically 30–55°C) to perform heat exchange with the drive (with a maximum temperature of 90°C). In this way, the drive temperature is greatly reduced, and the system runs more stably and reliably.

180° Sine Wave Control Technology

Non sensor control technology of permanent magnet synchronous motor makes output current of DC converter sine wave, which guarantee stability, reduce vibration prevent from electromagnetic interference to improve running efficiency

All DC Fan Motors

The new DC inverter fan motor allows to make the five-stage speed regulation and adjust the speed according to the change in the system operation, and finally guarantees the system runs under the best condition. By matching the air flow changes and variable refrigerant flow also the heat exchanging demand, the system operates in high efficiency and low operating noise.

High Efficiency Heat Exchanger

The outdoor heat exchanger adopts the high-efficiency internal thread copper pipe with the diameter of 7.0 and the new aluminium fin; its integral molding technology guarantees the larger heat exchange area, improves the air flow distribution, reduces the airflow resistance, exchanges the heat more efficiently, and reduces the impact of the frosting on the heating capacity of the system.

● Refrigerant circuit of TOD

The specially designed TOD circuit increases the liquid refrigerant volume, improves and optimizes the heat exchange efficiency of the refrigerant.

● Inner-grooved copper pipe

The groove of the premium & efficient inner-grooved copper is designed on its inner surface, which increases the contact area of the refrigerant and improves the heat transfer efficiency.

● Hydrophilic aluminum fin

The outdoor unit adopts the louver-type aluminum foil with the hydrophilic coating, which can efficiently prevent dirt accumulation, improve defrosting efficiency and enhance the heat exchange efficiency.

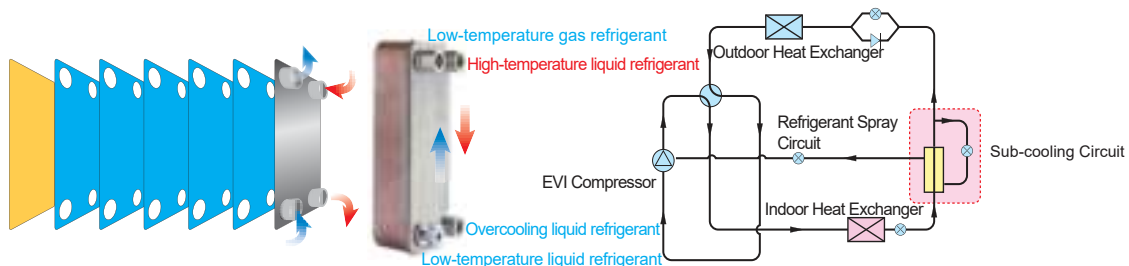

● 2-in-1 Refrigerant Loop

The specially designed 2-in-1 refrigerant loop can increase the liquid refrigerant volume and comprehensive heat exchange coefficient, making refrigerant heat exchange more sufficient and system more optimized.

Sub-cooling Design

The unique sub-cooling design enhances the cooling capacity, heating capacity, cooling efficiency ratio (EER) and heating efficiency ratio (COP).

Large Capacity Compressor Design

Less compressor configuration improves the system stability. The heating capacity is more powerful under low temperature, the exhaust volume and heating capacity are further improved for the large capacity compressor configuration under the equivalent frequency.

High Reliability

Six type oil return control Tech

By virtue of the solid R&D strength, TICA central air conditioning system integrates the advanced VRF technology process of Japanese expert team, and the full series of VRF units adopt the six-level oil control technology to make operation more stable and reliable.

3. New Pipe Design

Velocity difference design Cyclone Oil track design

Patent:
CN203385255U

5. Gas Separator

Accurate refrigerant volume control between two compressors;

Patent: CN201320344739.5

4. Efficient Oil Separator

99/9% separation efficiency

6. Intelligent Control

Predict the oil level in system and balance the oil between modules

2. Oil balance between comps.

Redistributing the oil

Patent:
CN203385240U

1. Internal Oil Separation

Less Oil enters the system

Oil Cup to storage the oil
Oil Balance pipe design

Efficient Heating and Smart Defrosting

● TCC (TICA Comfortable Control) defrosting technology (patent No.: CN201320402500.9/ CN201320344961.5)

The unique TCC defrosting technology of TICA adopts the non-stop method. It is unnecessary to switch to the cooling mode when defrosting in winter, and less exhaust temperature fluctuation of IDU. There is no need to worry about the indoor instantaneous temperature reduction. The technology makes the system performance more stable and noise lower.

● Smart defrosting technology

The smart defrosting technology allows to detect when to defrost according to every heating parameter, which can guarantee high heating capacity and energy efficiency ratio.

With the full load, the TIMS system will detect the defrosting time according to the heat transfer temperature difference of the outdoor unit. With the partial load, the TIMS system will detect the defrosting time according to the heat exchange efficiency of the outdoor unit.

● Bottom Frosting Prevention Design during Heating

The system employs the unique bottom frosting prevention design during heating to ensure that the ice water mixture is completely exhausted from the unit bottom during heating defrosting in winter, and avoid decrease of the heating capacity caused by frosting at the unit bottom.

● Anti snow capacity

When it snows heavily in winter, the TIMS unit will give priority to start the outdoor fan motor before user starts the outdoor unit; such design prevents the unit from being covered by the snow. Once the unit works normally, the fan will run normally.

Automatic Detection and Regulation Technologies

● Control Technology of Multiple Electronic Expansion Valves

A single ODU module is provided with multiple electronic expansion valves. Every electronic expansion valve can implement 480-step refrigerant flow regulation, control the refrigerant circulation quantity and meet the actual IDU requirement accurately, thus creating a more comfortable indoor environment.

● Small Room Temperature Fluctuation and High Precision

The DC inverter control technology is adopted to reach the set temperature rapidly when the unit starts, fine regulation is performed according to the load in the room, and the room temperature is controlled within $\pm 0.3^{\circ}\text{C}$ of the set temperature, fully meeting the customer's temperature requirement.

● Accurate Detection Technology of Refrigerant Pressure

The high/low pressure sensor is used to conduct real-time monitoring on the system refrigerant pressure, match the DC inverter module perfectly, and regulate the system refrigerant pressure to the optimal state, ensuring more stable operation of the unit.

● Automatic Addressing

The ODU main board automatically checks the IDU quantity and allocates addresses to IDUs without requiring manual code dialing, and installation is very convenient.

● SMT Surface Sealing Technology of Control Board

All the control boards adopt the SMT surface sealing technology, and sealing material is added to the control board surface to improve the anti-clutter interference performance of control board, prevent the control board from being affected by wind, sand and humid environment, and prolong the service life.

Stable Operation Functions

● Automatic Startup after Power Restoration

In case of an unexpected power failure, the system automatically stores the set memory. When power is restored, the system can restart automatically (manual startup can also be set), and the setting before the power failure will not be canceled but will continue to take effect. The program does not need to be reset, so service becomes more intelligent and considerate.

● Dual-rotation Operation Function

To ensure operation time balance between compressors and modules, TMS can implement cyclic operation of all the compressors and modules to average the operation time of each compressor and each module effectively, enhance durability of the entire unit or system, and prolong the service life.

● Three-backup Operation Function

For single-module ODU, If one compressor or motor malfunctions or is being maintained, other compressors and motors can be urgently put to use. For multi-module ODU, if one module is being maintained, the other modules can also be urgently put to use, without affecting usability.

Backup operation function of compressor/motor

Module backup operation function

Multiple Protection Technologies

● Pipeline Exception Protection

When detecting a pipeline exception (too much or too little refrigerant, etc.) through real-time monitoring, the system can start pipeline exception protection immediately to avoid further losses.

● Anti-Reverse-Rotation Protection

In case of reverse rotation of ODU fan, the system will stop the fan first upon air conditioner startup, and then make it rotate in the correct direction of rotation as programmed, preventing the fan blade from being damaged.

● Thunder Stroke Protection

The ODU is designed with a thunder stroke protection module, greatly reinforcing the anti-interference and thunder stroke protection functions of the unit and making the system operation safer.

● IDU Maintenance Power-down Function

When an IDU needs to be stopped for maintenance, it can be powered down separately, without affecting operation of the entire system.

● Emergency Shutdown Function

In case of an emergency, the ODU can be shut down immediately and forcedly, to avoid causing harms and losses.

● Power Phase Sequence Protection and Grounding Protection Function

The unit is equipped with a power supply protector. In case of any exception such as phase sequence error or phase loss, the controller will record the power supply failure and report an alarm for shutdown.

● Power High/Low Voltage and Current Protection Function

The ODU can identify the power supply signal directly. In case of inadequate power supply (insufficient or too much), the ODU will send an instruction to the IDU to prohibit startup, thus effectively protecting the system safety.

● Compressor and Motor Overheat Protection

Multiple temperature sensors are installed to efficiently prevent scroll plate wear, carbonization metamorphism of oil, and motor damage due to reasons such as overheat of the compressor or motor.

● Compressor Error Protection

The function includes compressor suction and exhaust temperature protection, compressor high/low pressure protection, compressor oil return protection, compression ratio protection, compressor oil temperature protection, pressure difference protection, compressor overload and over-current protection, compressor anti-liquid hammer protection, etc.

● Inverter EMI Protection and Temperature Protection

The system adopts the inverter of upgraded control accuracy, which can suppress harmonic current well and features high degree of EMI protection. When the system detects overheat of the inverter, it can start the inverter temperature protection function to prevent damage to the inverter.

All-dimensional ultra-silent technologies

The TIMS series adopt the omni-directional noise reduction technology and spiral flow fan blade to ensure a smooth suction structure and reduce the air flow noise. Supplemented with the sound insulation design of compressor, the unit can realize ultra quiet operation and create a comfortable environment of high quality.

The professional streamlined duct based on the fluid mechanics design helps to reduce the duct tremor generated due to the air flow resistance and has been awarded the title of patent technology.

The fan blades with a larger diameter are adopted to yield a larger air volume at a lower speed and make noises lower.

The fan motor support employs a non-resonant hanger structure to ensure stable operation performance of the motor and reduce the vibration noise.

Vortex fan blade: The CAE auxiliary design and CFD air flow analysis technology are used to optimize the fan design, not only lowering the vibration, but also greatly reducing the pressure loss.

The air streamlined fan grille promotes more smooth discharge of vortex air flow and reduces the pressure loss.

The brushless DC motor is adopted to implement stepless speed regulation and more stable operation, reducing noises as ensuring energy conservation and high efficiency.

The compressor employs the 180° sine wave control technology to ensure smooth and stable operation, and abnormal noise during operation of the compressor can be suppressed effectively.

The noise enclosure design for the compressor avoids diffusion of compressor noises effectively.

● Night Silent Mode

The system adopts the delay judgment mode based on the outdoor ambient temperature peak. Meanwhile, it will automatically judge whether to start the night silent operation mode according to the ODU ambient temperature and the current load size.

● Forced Silent Mode

For the site with a higher silent requirement, the user can select the forced silent operation mode as actually needed to reduce the operation noise of the unit and create a more quiet and comfortable environment.

● Smart silent mode

After smart silent mode is selected, the unit may monitor duty ratio real time and system running state, and automatically enter silent mode to minimize unit running noise, ensuring passenger comfort.

Convenient Application

● Compact, Easy to Transport and Handle

The modular combination requires less floor space, even the largest module occupies only an area of 1.07 m², and seamless assembling between modules promotes further space savings.

● 360° Outlet Pipe Connection

During construction, the refrigerant pipe can be connected to the unit front, left or right freely, reducing the construction cost and construction difficulty and facilitating engineering design and installation.

● Stable and Worry-free Operation

The system can control the air conditioner of each room respectively. Once an IDU fails, the other IDUs of the system are not affected and can keep operating properly.

● Easy and Convenient Maintenance

TIMS adopts intelligent control and requires no equipment room. Maintenance by designated person is not needed even during system operation, and control is more flexible.

● Automated Diagnosis and Self Repair of Faults

The unique automatic fault diagnosis function can be used to get the fault information easily and realize self repair of some faults, enhancing the operation stability and reliability.

● Auto refrigerant judgment and smart charging and recycling

The system may monitor the refrigerant operation in the pipeline real time, automatically decide on the refrigerant quantity necessary for the system and make real-time adjustment based on pressure change and actual operation. In case of insufficient refrigerant in the system or during maintenance, the refrigerant can be conveniently and automatically charged or recycled to the ODU.

● **Non-polarized communication**

Non-polarized communication connection is realized between the IDU and the ODU to avoid wrong or opposite connection of wires, greatly simplifying installation process and expediting construction period.

● **Ultra-high External Static Pressure**

The system selects the blade with a higher air flow and the DC fan motor to realize a higher external static pressure on the precondition of avoiding noise change. The maximum external static pressure is 80 Pa.

● **Trial Operation Technology of ODU**

During commissioning, the button on the ODU main board can be pressed to implement the forced trial operation function of the unit, making commissioning easier.

Exhaust ducts can be installed by layer or in a centralized manner. The higher external static pressure realizes long distance air supply, prevents short circuit of the loop effectively, and ensures good ventilation effect.

● **Easy Refrigerant Pipe Design and Selection**

The installation of the ODU modules does not distinguish between main module and sub-module, realizing smart installation.

TIMS uses branch pipe in installation to simplify system installation. One system only has one set of refrigerant pipelines, unlike a conventional central air conditioning unit, which needs various accessories. The copper pipes are much smaller than that of water pipes to save installation space.

● **Smart and accurate system capability distribution**

The capability output of different units is distributed as per different horse power and weight between modules to ensure that the compressor of each unit is adjusted with the unit within energy saving, efficient and stable frequency output scope

● **Energy saving mode**

When the unit works with partial load, the user may enable energy saving mode based on actual use demand to adjust the operation frequency of the compressor and the fan motor to improve the system's energy efficiency and save operation costs for users.

● Easy Refrigerant Pipe Design and Selection

The models of ODU main pipes and IDU branch pipes should be selected according to the parameter table. For the ultra-long pipeline, refer to the installation manual.

- **Superior Technologies** 26
- **Mini VRF specification** 29

Ultra Quiet Operation

Ten Major Ultra-silent Technologies

The scroll heating series adopt the all-round noise-reducing technology and newly-designed fan blade to reduce the air flow noise through the smooth suction structure, and the compressor noise isolation technology to implement ultra-silent operation, creating a high-quality and comfortable environment.

Newly-designed fan air duct with the streamlined distribution of the air discharge grilles can reduce the wind resistance and noise.

The PET (macromolecule acupuncture cotton), which is the kind of cotton specially used by high-speed railway to isolate noise, perfectly absorbs noises of all frequency bands.

CFD analogue simulation, together with the new fan blade, and the 4-blade axial flow design guarantee a better heat-exchanging performance and lower noise.

The DC brushless motor features stepless speed adjustment and more stable operation, achieving higher energy efficiency and reducing noises.

The 180° sine wave control technology applied to the compressor ensures the smooth and stable operation of compressor and effectively inhibits the abnormal noise during operation.

Advanced reactor can completely eliminate electromagnetic noise.

The compressor noise enclosure effectively avoids the proliferation of compressor noise.

Smart Night Silent Mode

The system adopts the delay judgment mode based on the outdoor ambient temperature peak. Meanwhile, it will automatically determine whether to enter the night silent mode according to the current ambient temperature and load size.

The minimum noise of silent operation can be as lower as 45 dB (A).

Forced Silent Mode

For supporting projects of high-rise buildings or sites with a stricter silent requirement, users can select the forced silent operation mode as required to reduce the operation noise of the unit and create a more quiet and comfortable environment.

Night Forced Silent Mode

For a higher requirements of quietness and higher requirements for silent mode at night, the night forced silent mode provides a more quiet environment under a variety of conditions.

Superior Technologies

Are you looking for a cozy room with less electricity used? All DC Compliant Enhanced Vapor Injection Scroll Compressor Three Core Technologies for Excellent Performance

Floating sealing ring technology improves compressor's starting performance

Patented enhanced vapor injection (EVI) technology

High-efficiency centralized stator winding improves motor rated efficiency to > 95%

3.4 mm-thick casing design

Variable volume ratio scroll technology substantially improves energy efficiency of compressor with low pressure ratio

6-pole permanent magnet motor Stable operation with 900–7200 RPM

Oil duct reduces oil circulation rate when compressor is working at high speed

Volumetric oil pump Oil pumped does not vary with oil level.

● C — All DC Inverter Technology

The secret of high energy efficiency
All DC inverter compressor, the core source of power, is equipped with a 6-pole high-efficiency motor, and the enhancement of part load efficiency is tailored to better suit the operations of low ambient temperature heating units.

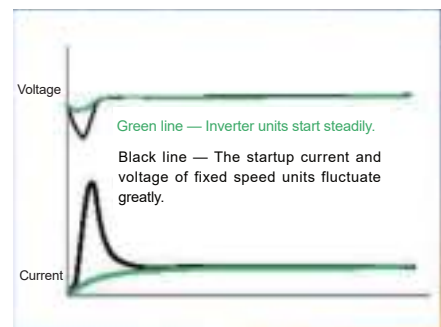

● More applicable to regions with voltage fluctuation in power supply

The all DC inverter system starts flexibly, with the rotating speed of the compressor increasing steadily, the current rising slowly, and small impact on the power grid. Even under the condition of 160 V ultra-low voltage or 260 V ultra-high voltage, the system can still start and operate normally, and provide comfortable heating service.

VS

The fixed speed system starts the compressor instantly. The startup current of up to 6–7 times of the operating current may result in a sharp drop in power supply voltage, and lead to a failure of unit startup and the even more serious problems during peak periods.

● No heating capability attenuation at -20°C No cooling capability attenuation at 43°C

Enhanced Vapor Injection Technology — Strong Heating Capability Without Electric Auxiliary
Just like the difference between turbo supercharging and normal aspiration (2.0 T = 3.0 L)
The world's most advanced technology for heat pump system dealing with low-temperature heating
The whole series adopt the high-efficiency EVI system and the new variable-frequency control and refrigerant system of TICA, achieving excellent heating performance even at the ultra-low temperature of -30°C. The heating capability is increased by over 45% and won't subside at -20°C. In hot summer, the cooling capability won't decrease even at 43°C, assuring you a cool summer indoors.

● Compact design

TICA scroll heating series of household central air conditioner feature a compact design with a single fan and three-layer high-efficiency and high-quality heat exchanger.

With a mini body, they can be easily installed in a small space such as a bay window, optimizing the spatial pattern and making your home more beautiful and fashionable.

● Smart and Quick Defrosting

The patented smart vapor injection defrosting technology of TICA can increase the refrigerant circulation flow during defrosting, which will shorten the defrosting time, reduce the cold air felt by customers during defrosting, improve the defrosting efficiency, and cut down the power consumption.

● Oil Return When Heating Without Stopping the Unit

Traditional units have to be turned off to achieve oil return, while TICA scroll heating series of household VRF units can implement heating without switching the direction of the refrigerant flow. This series adopts the modes of on-demand oil return and high/low frequency switchover oil return to prevent wild fluctuation of indoor temperature, and provide user with more comfortable experience.

Maximum actual length of single pipe	50m
Maximum equivalent length of single pipe	75 m
Maximum total equivalent pipe length	100m
Maximum drop of indoor/outdoor unit	30 m
Maximum drop of indoor unit	8 m
Maximum permitted length after first branch	15 m

* Pls consult the detailed technical documentation or other matters with the relative technicians.

Smart Home

Technology-driven intelligence for smarter life, be a real air conditioning messenger.

Plenum box	Air filter	EXV	Drain pump	AC motor	DC Motor
/	Standard	Standard (built-in)	Standard	Standard	/

● 360° air outlet, no blind spot

● Compact design, only 230mm height

Has slim body with 230mm height, it is specially suitable for low suspended ceiling rooms.

● Built-in drain pump, drain height can be 1200mm

Built-in with a fully-automatic drain pump. Pumping head is up to 1200mm, flexible for drainage pipe design.

● Streamlined panels in uniform size, elegant and generous

Newly designed streamlined panel, stylish and elegant.

● Air flow from ceiling to ground

The air supply is not limited by the floor height. The cold air can reach the ground in a room of up to 3.5 m high to achieve optimum air conditioning performance.

● Ultra Quiet Operation

The use of aerospace technology on 3D spiral fan blades with optimized air duct design reduces internal resistance of the unit and achieves ultra-quiet operation, creating a comfortable and pleasant environment.

● Unique PM2.5 and formaldehyde purification solution

PM2.5 and formaldehyde filters are optional to provide super-clean indoor environment.

Notes:

- Power supply: 220V/1PH for 50Hz
- The cooling condition: indoor side 27°C (80.6°F) DB, 19°C (60°F) WB outdoor side 35°C (95°F) DB
- The heating condition: indoor side 20°C (68°F) DB, 15°C (44.6°F) WB outdoor side 7°C (42.8°F) DB
- Sound level: measured at point 1m in front of the unit at a height of 1.3m. During actual operation, these values are normally somewhat higher as a result of ambient conditions.
- The above data may be changed without notice for future improvement on quality and performance.

Ceiling & Floor

● Accessories

Plenum box	Air filter	EXV	Drain pump	AC motor	DC Motor
/	/	Standard External	/	Standard	/

● Flexible installation, on the floor or on the ceiling

● Automatic horizontal and vertical air flow

● One sided access hole, easy for maintenance

● Low noise and low energy consumption

Unequally spaced oblique angle large diameter through-flow fan is used to ensure strong air supply, lower fan speed and lower energy consumption

Low noise design

Streamlined design with elegant appearance

The unit has elegant profile and various interiors. The newly designed louver can help with better air-flow diffusion of the conditioner, uniformly distributing air into the whole space in a comfortable way.

Air supply with wide air flow achieving more significant effect

The unique two-layered auto swing providing wider air supply range to optimize air flow compared to conventional units.

Fast heating providing a warm and comfortable environment

Optimized interior structure greatly increasing the temperature at air outlet to reach set temperature ASAP and realize fast heating.

Ultra-silent operation leading a quiet life

Brand-new highly efficient noise reduction motor built with the latest technology minimizing the noise of IDU; air duct designed with good sound insulation ensuring silent and smooth air supply.

Standard duct

● Accessories

Plenum box	Air filter	EXV	Drain pump	AC motor	DC Motor
Standard	/	Standard (built-in)	Standard (built-in)	Standard	/

● Simple design, short body, easy to install

● Built-in drain pump, drain height can be 1200mm

Built-in with a fully-automatic drain pump. Pumping head is up to 1200mm, flexible for drainage pipe design.

● Simple design, short body, easy to install

Ultra-thin body with the thickness of only 250 mm installed in a concealed way to lift the height of the suspended ceiling, especially suitable for ceilings with narrow height of suspended ceilings

● Flexible air return ways

Flexible and diversified insulation designs providing options for back air return or lower air return based on the suspended ceilings at the site to perfectly coordinate with the interior decorations

● Ultra quiet operation

The fan motor of delicate and compact design equipped with brand-new propeller housing with vibration absorption function delivering operating noise as low as 24dB(A) to satisfy rigorous noise requirements at different sites

● Wider range of static pressure and stronger air supply

The static pressure has three steps with the highest up to 70 Pa capable of direct delivery or connection with air duct. The flexible selection can create comfortable space

● Ultra Quiet Operation

The use of aerospace technology on 3D spiral fan blades with optimized air duct design reduces internal resistance of the unit and achieves ultra-quiet operation, creating a comfortable and pleasant environment.

Slim duct

● Accessories

Plenum box	Air filter	EXV	Drain pump	AC motor	DC Motor
Standard	/	Standard (built-in)	Standard (built-in)	Standard	/

● Built-in drain pump, drain height can be 1200mm

Built-in with a fully-automatic drain pump. Pumping head is up to 1200mm, flexible for drainage pipe design.

● Delicate design and compact body

Designed with 200 mm thickness, the body is lighter and the installation space required is smaller, making it suitable for more small space.

● Ultra-silent design leading a quiet life

Use the brand-new CFD optimized duct and simulated fan blades to ensure softer air supply, and the auxiliary streamlined embedded foam drain pan lowers noise of eddy current to 23 dB, equal to the normal human breathing sound, bringing you a naturally quiet home.

● Flexible air return

The air return plenum as standard configuration may change air return mode based on the actual circumstances at the site to enable more flexible air return.

● Unique PM2.5 and formaldehyde purification solution

PM2.5 and formaldehyde filters are optional to provide super-clean indoor environment.

High ESP duct

Accessories

Plenum box	Air filter	EXV	Drain pump	AC motor	DC Motor
Standard	Standard	Standard (Built-in)	/	Standard	/

High static pressure enabling far air supply

The external static pressure reaches 100 pa, making it possible to connect long air duct to realize long distance air supply, especially suitable for scenarios needing air supply by long air ducts.

Various air supply modes suitable for different room types

Choosing different air supply modes as per room structure, one IDU of air conditioner can meet the diversified space requirements.

Intake fresh air to improve air quality

Small amount of outdoor fresh air can be introduced through the air duct to ensure the quality of room air.

Industry-leading with low noise operation

Brand-new noise reduction technology effectively reducing noises of the unit to provide quiet and pleasant environment.

Labyrinth patent design, air leakage rate lower to 0.029%

TICA obtained the patent for its first invention - labyrinth structure air handling unit in 1998. Since then, opening up a new chapter for AHU in China. TICA's high-capacity duct type IDU is designed with this patent. The junction part of the unit uses aluminum profile with a concave groove and a convex groove and is secured with bolts and nuts to form a labyrinth sealing structure, achieving the air leakage rate as low as 0.029% - only 1/66 of the air leakage rate allowed in the national standard and realizing lower operating costs.

300Pa high static pressure, suitable for large space

TICA's high-capacity duct IDU has the static pressure up to 300 Pa, making it possible to connect extra long air duct to realize long distance air supply as high as reaching the suspended space, suitable for high reaching space at individual building below 20,000 square meters and partial high reaching space.

Robust double-wall design eliminating cold bridge condensate

All the metal parts in the cabinet of AHU are isolated from outside metal parts using polyurethane foam and specially designed sealing strips, avoiding the thermal insulation strips attached inside the common product to prevent condensation, eliminating water dripping at the cold bridge and lowering the noise of the unit.

Purification section as optional

Intelligent Control

Independence Control

- Optional contact keys look attractive and simply operation
- Run, stop, temperature setting, swing, sleep, and power failure memory etc.
- Switching among cooling/heating/auto/fan/dehumidification modes failure memory etc.
- LCD screen showing operating condition
- Temperature setting, timed power-on/-off
- Error codes display
- Filter cleaning reminder
- Back-light display facilitating operation at night

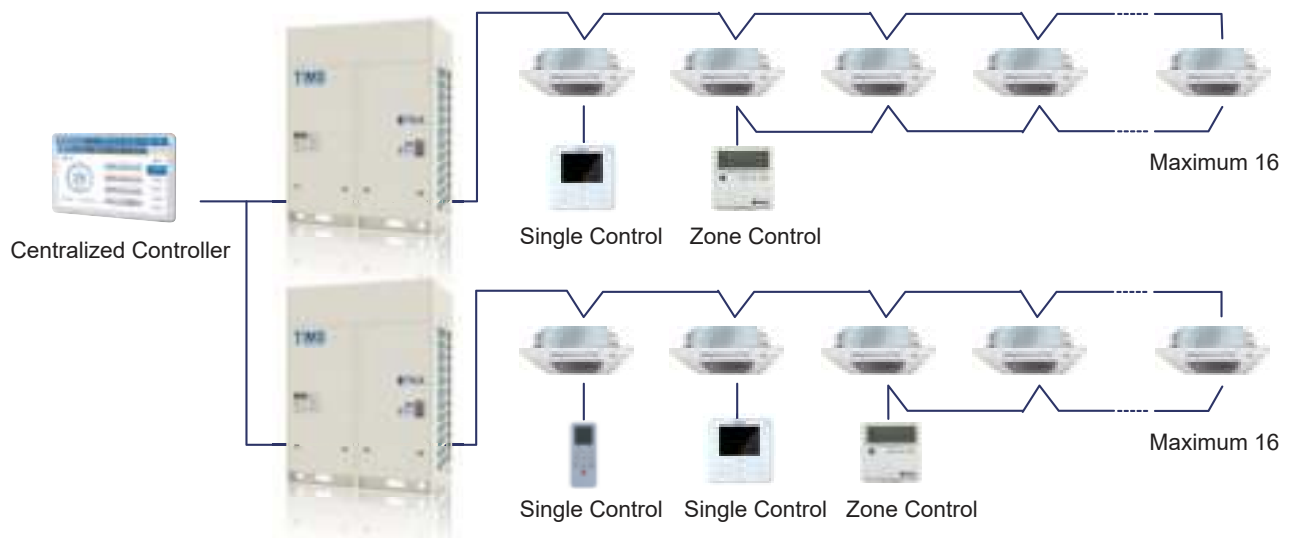

Centralized Control

● Remote centralized controller

- Able to implement centralized control or separate control on 64 IDUs in 8 systems
- Mode locking and single unit query/all control functions
- Setting operation start and end time of air conditioner
- Fault indication, uniform control interface and humanized operation interface
- Mode switching
- Supporting the longest control signal line of 1000 m
- Operating status monitoring function
- Fault code display function

Centralized control

Intelligent Management Software

● Intelligent Management Software

The IDUs are connected to a computer so that full automatic control can be implemented on the system through the computer. The control function is powerful, and operations are simple and clear. One set of intelligent management system can connect to 32 sets of systems and 2048 IDUs at most, and realize large scale centralized control.

- Free grouping and zone management
- Perfect schedule management function
- Historical data record
- Schedule control function of week/month/year
- Single-unit or centralized operation, shutdown, temperature setting, mode switching, etc.
- The air conditioning systems of multiple buildings can be controlled in a centralized manner at the same place
- Permission setting
- Temperature control, time switch
- Fault code display function
- Interlock control
- Remote management

● Electricity Charge Distribution Software

- Electricity Charge Distribution Software provides the complete unit monitoring and control functions and can realize all-dimensional dynamic monitoring on the ODU operating status.
- Network control is realized for a maximum of 2048 IDUs, and the control signal of the data acquisition module can reach the maximum distance of 1200 m.
- The cooling system topology map can be set and displayed visually.
- The market-tested electricity fee distribution algorithm implements convenient electricity fee distribution management, and detailed historical data forms can be generated.
- Users, electricity prices and groups can be set so that the user can realize flexible management on household-based charging of VRF units.
- System energy saving settings:
 - ① Operating status monitoring function
 - ② Fault code display function

Building Management System (BMS)

TIMS adopts multiple automatic control systems to access the building automation system easily, and full automatic control of the system is realized through the computer. The control function is powerful, and operations are simple and clear.

LonWorks system

- Connecting to a maximum of 1024 IDUs and 16 sets of ODUs
- Powering on/off the air conditioner, controlling operation, and monitoring the operating status
- Monitoring the IDU fault code
- Monitoring and setting the IDU temperature
- Monitoring and switching the operating mode
- Setting remote controller permissions
- Free grouping and zone management
- Perfect schedule management function
- Historical data recordn
- Schedule control function of week/month/year
- Single-unit or centralized operation, shutdown, temperature setting, mode switching, etc.
- Interlock control (f re alarm, door lock, fault, etc.)

BACnet system

- Connecting to a maximum of 1024 IDUs and 16 sets of ODUs
- Powering on/off the air conditioner, controlling operation, and monitoring the operating status
- Monitoring the IDU fault code
- Monitoring and setting the IDU temperature
- Monitoring and switching the operating mode
- Setting remote controller permissions
- Service monitoring
- Automatic unit operation according to settings
- Shielding function of the user's air conditioner controller
- Free grouping and zone management
- Perfect schedule management function
- Historical data record
- Schedule control function of week/month/year
- Single-unit or centralized operation, shutdown, temperature setting, mode switching, etc.
- Interlock control (f re alarm, door lock, fault, etc.)

ModBus system

- Connecting to a maximum of 1024 IDUs and 16 sets of ODUs
- Powering on/off the air conditioner, controlling operation, and monitoring the operating status
- Monitoring the IDU fault code
- Monitoring and setting the IDU temperature
- Monitoring and switching the operating mode
- Setting remote controller permissions
- Service monitoring
- Automatic unit operation according to settings
- Shielding function of the user's air conditioner controller
- Free grouping and zone management
- Perfect schedule management function
- Historical data record
- Schedule control function of week/month/year
- Single-unit or centralized operation, shutdown, temperature setting, mode switching, etc.
- Interlock control (fire alarm, door lock, fault, etc.)

● Intelligent Diagnosis/Debugging/Upgrade Function ("Black Box")

The "Black Box" data saving device is provided so that the data related to unit operation can be read conveniently during after-sales maintenance and debugging, greatly enhancing the convenience of maintenance and debugging.

When the system program needs to be upgraded, save the IDU and ODU control program in a USB drive, and insert the USB drive into the reserved USB interface of the main board. Then, the system control program can be upgraded through simple and intelligent button operations.

Smart control - powerful extension function

● Intelligent Interlock for Hotels

The specially designed seamless connection interface for hotel door card can be selected in the application scenarios such as hotels. When the door card is inserted, the IDU can be controlled freely; when the door card is removed, the IDU is turned off automatically after a delay, making hotel management convenient and saving power.

● Auto infrared induction

As specifically required, sensitive infrared induction technology may be provided to sense the dynamics in the room and automatically adjust the on/off of the unit, saving valued resources for users.

● Remote control from tablet

In order to meet the demand for remote control, the user can easily carry out remote control of the unit through respective commands sent to the unit by LAN or INTERNET communication facilities cooperating with ODU communication.

TICA VRF UNIT CLEANING TECHNOLOGY

- Zhenjing series return air purifier 53
- Fresh Air Ventilator 54
- Fresh Air Ventilators of Medium-sized High-end Series 55
- Purifying heat recovery fresh air handling unit 56

Zhenjing series return air purifier

- **Pre-filter layer**

Pre-filtration of large particles in the air

- **PM2.5 filter layer**

PM2.5 filtration efficiency reaches 96% (in a cycle of 120 min)

- **Formaldehyde filter layer**

Formaldehyde filtration efficiency reaches 90% (in a cycle of 60 min)

PM2.5 filter layer

- Low resistance: 5 Pa&1m/s, open passage
- Efficiency: The unique electrostatic technology can hold static electricity on the filter material for up to 10 years
- Self-supporting structure, no frame is needed
- 100% synthetic fiber, resistant to moisture and general chemicals
- Environmentally friendly and fungus resistant

Formaldehyde filter layer

- The surface of cellular carrier is uniformly laid with trapping agents to allow quick reaction with aldehyde group
- Aldehydes materials can be removed through chemical reactions to eliminate the possibility of second release due to excessive absorption or heating

Integrated access hole

- New panel with integrated access hole and return air inlet. No mounting marks on the ceiling, elegant and attractive.

Without access hole (old)

With access hole (new)

Fresh Air Ventilator

● Fresh Air Ventilator

The fresh air ventilator is a fresh air product of recovering exhaust heat energy and reusing it for air supply. The fresh air and exhausted air flow through the heat exchanger crosswise and implement temperature and humidity exchange in the fresh air ventilator. In this way, the fresh air recovers the majority of energy from the air exhausted from the air conditioner, saving energy and reducing consumption.

● Fresh Air Ventilators of Standard Series

Patent structure with a low air leakage rate

The joints of cabinet adopt aluminum profiles with concave and convex grooves, which form a labyrinth-type patent sealing structure together with fastening bolts and nuts, reducing the air leakage rate to 0.029% and ensuring lower operation cost.

Eradicating cold bridge and rust

All the metals in the cabinet are isolated from external metals using polyurethane foam and specially designed sealing strips, avoiding the thermal insulation strip that must be stuck for ordinary products to prevent condensation, putting to an end to the water dripping problem of cold bridge, and also reducing the unit noise.

The built-in full heat core heat exchanger achieves higher heat exchange efficiency, the maximum temperature efficiency of 70%, and the maximum enthalpy efficiency of 60%.

High efficiency and energy conservation

The direct drive fan is adopted and does not need to be maintained. Only the filter screen needs to be cleaned regularly.

Safe and reliable

Fresh Air Ventilators of Medium-sized High-end Series

● Characteristics:

The air flow range is 1000 m³/h~6000 m³/h, applicable to sites such as homes, conference rooms, labs, offices, equipment rooms, restaurants, and gyms. The installation is convenient. The machine is installed in the ceiling, without occupying the indoor effective space. More complete functions are implemented, including bidirectional ventilation, air purification, and energy recovery. The sheet metal structure is designed, with thermal insulation cotton stuck inside.

● Heat exchange principle

The heat recovery core, which is the key part of fresh air ventilator, is formed by cross-laminating single-sided corrugated paper sheets. During laminating, the edge of each single-sided corrugated paper sheet at the corrugated groove direction is rotated by 90° to form two vertical channels with the functional parallel paper in the middle, and fresh air and return air exchange heat and humidity through the functional parallel paper.

Purifying heat recovery fresh air handling unit

Multiple haze removal, healthy home

Must-have for haze removal

More layers of filtering bring more health protection. PM2.5 removal rate of up to 95%.

All-round air replacement

Enjoy fresh air without having windows open

The unit is ceiling-mounted in places not that noise-sentimental. With all air ports put indoors, it can ensure that air is supplied and discharged evenly and smoothly.

Efficient energy recovery

Efficient heat exchanger core

- The heat recovery core is formed by cross-laminating and rotating single-sided corrugated paper sheets by 90°. Such core has two vertical paths which leave each other in peace. In this way, the fresh air and return air could go separate ways and heat and humidity can be exchanged.
- Equipped with Japan's latest technology, the parallel paper for such core is uniform in texture and without pores, and shows heat recovery efficiency of 80%.

Parameters of purifying heat recovery fresh air handling unit

Model	TRV015	TRV025	TRV035	TRV050	TRV080
Power supply	220V~50Hz				
Input power W	105	135	276	365/380	550/570
Current A	0.5	0.6	1.25	1.7/1.76	2.5/2.62
Air flow m ³ /h	150	250	350	500	800
Purification efficiency	95%	95%	95%	95%	95%
External static pressure (Pa)	80	80	80	50/100	50/100
Heat exchange efficiency (heating/cooling) %	85/67	82/63	80/62	73/61	71/62
Enthalpy exchange efficiency (heating/cooling) %	75/55	72/52	68/51	64/50	65/50
Noise (dB(A))	32	34	39	43	45
Net weight (kg)	24	24	27	53	60

Prestigious Projects in Overseas Market

Sold to more than 50 countries and regions, including Russia, Peru, Chile, Singapore, Georgia, Malaysia, Philippines, Turkey, UAE, etc

Asan Government Center in Baku AZ

SM Shopping Mall, Dasmariñas, Philippines

BIOCAD Biopharmaceutical factory in Russia

Asan Government Center in Sumqayit AZ

The Heritage Building, Ministry of Education, Malaysia

CitiDoctor in Ukraine

Hotel Uzbekistan, Tashkent, Uzbekistan

Shangri-La Casino, Tbilisi, Georgia

Abu Dhabi Al Raha Beach hotel

Hard Rock Hotel, Penang, Malaysia

Singapore's IMM Mall

Zamin Bio Health, the unique insulin factory in Central Asia, Uzbekistan

TIMS

Inverter Multi
